

Contents

<i>Chapter 1</i>	MORPHOLOGY AND PHYSIOLOGY OF STOMATAL CELLS	1
1.1	The occurrence of stomata in the plant kingdom	1
1.2	The differentiation of stomata	6
1.3	Dimensions and structure of guard cells	10
1.4	The mechanism of guard cell movement	14
1.5	The contents of guard cells	18
1.6	Properties and functions of subsidiary cells	22
1.7	Modifications of the stomatal apparatus with habitat	23
<i>Chapter 2</i>	THE MEASUREMENT OF STOMATAL APERTURE	26
2.1	The choice of plant material	27
2.2	Microscopic measuring techniques	29
2.3	Macroscopic measuring techniques	31
2.4	Viscous flow porometers	32
2.5	Diffusive flow porometers	42
		xi

CONTENTS

<i>Chapter 3</i>	THE THEORY OF DIFFUSION THROUGH STOMATA	49
3.1	The rate of diffusion of a gas	49
3.2	Details of the diffusion path between leaves and the atmosphere	55
3.3	Stomatal control of transpiration	59
3.4	Stomatal control of photosynthesis	63
3.5	The experimental control of stomatal aperture	66
<i>Chapter 4</i>	STOMATAL RESPONSES TO ENVIRONMENTAL FACTORS	69
4.1	Light and carbon dioxide	70
4.2	Transmission of an opening or closing stimulus	85
4.3	Temperature	87
4.4	Water supply	92
4.5	Relative humidity of the atmosphere	100
4.6	Interactions between environmental factors	101
<i>Chapter 5</i>	THE ROLE OF RHYTHMS IN STOMATAL BEHAVIOUR	102
5.1	Endogenous rhythms	103
5.2	Night opening of stomata	109
5.3	Rhythms and the normal diurnal movements of stomata	113
5.4	After-effects of environmental factors on rhythms	113
5.5	Stomatal behaviour in succulent plants	114
5.6	Short-period fluctuations	118
<i>Chapter 6</i>	STOMATAL OPENING AND CLOSING REACTIONS	119
6.1	Sources of energy for stomatal movements	119
6.2	Dynamics of stomatal movements	128
6.3	Distinction between the maintenance and the production of opening	131
6.4	Effects of temperature on opening and closing movements	131
6.5	Ionic effects	132
<i>Chapter 7</i>	HYPOTHESES OLD AND NEW	135
7.1	The glycollate hypothesis	135
7.2	Dark carboxylation reactions	138

CONTENTS

	7.3 The role of starch $\rightleftharpoons$ sugar interconversion	141
	7.4 Permeability changes	145
	7.5 Blue light effects	146
	7.6 What next?	147
<i>Appendix</i>	SOME SUGGESTIONS FOR PRACTICAL WORK	150
	A.1 Observations and measurements on epidermal strips	150
	A.2 Measuring stomatal aperture in intact leaves	154
	A.3 Stomatal responses to stimuli	155
	A.4 Experiments on gaseous diffusion	157
<i>Bibliography</i>		160
<i>Index</i>		170
