

contents

CHAPTER 1 CHARACTERISTICS OF LIVING THINGS

- 1-1 Introduction 2
- 1-2 Specific organization 3
- 1-3 Metabolism and excretion 4
- 1-4 Movement and responsiveness 4
- 1-5 Growth 6
- 1-6 Reproduction 6
- 1-7 Differentiation 6
- 1-8 Adaptation 8
- 1-9 Summary 8

CHAPTER 2 MAJOR GENERALIZATIONS IN BOTANY

- 2-1 Introduction 11
- 2-2 The cell concept 11
- 2-3 The gene concept 12
- 2-4 The mutation theory 14
- 2-5 Evolution and natural selection 14
- 2-6 Ecological interrelations 15
- 2-7 The molecular foundation of biology 16
- 2-8 Mechanism and vitalism 16
- 2-9 Summary 17

CHAPTER 3 THE NATURE AND LOGIC OF SCIENCE

- 3-1 Introduction 20
- 3-2 Scientific procedures 20
- 3-3 Inductive logic 25
- 3-4 The application of logic:
a case study 29
- 3-5 The limitations of science 33
- 3-6 Summary 35

CHAPTER 4 PRINCIPLES OF EXPERIMENTAL DESIGN

- 4-1 Introduction 38
- 4-2 Eijkman's experiments 38
- 4-3 The value of numerical data 40
- 4-4 The experiment 41
- 4-5 Five patterns of experimental design 43
- 4-6 Descriptive versus experimental
science 49
- 4-7 Chance and trial-and-error in scientific
discovery 50
- 4-8 Summary 51

CHAPTER 5
THE ANALYSIS
AND INTERPRETATION OF DATA

- 5-1 Introduction 55
- 5-2 Frames of reference for biological data 55
- 5-3 Normal curves and the analysis of distributions 57
- 5-4 From table to graph 58
- 5-5 Correlations 62
- 5-6 Interpolation and extrapolation 63
- 5-7 Generalizing points on a graph 64
- 5-8 The sigmoid curve 65
- 5-9 Scalar transformation 66
- 5-10 Summary 68

CHAPTER 6
CLASSIFICATION: THE BASIS OF
INDUCTIVE GENERALIZATION IN BIOLOGY

- 6-1 Introduction 73
- 6-2 Some principles of classification 73
- 6-3 Development of botanical classification 74
- 6-4 The naming of plant species 77
- 6-5 The problem of species definition 79
- 6-6 Classification and scientific procedure in biology 82

- 6-7 Classification systems as scientific models 83
- 6-8 What is a plant? 83
- 6-9 A brief classification of plants 84
- 6-10 Interrelationships of plants and other organisms 92
- 6-11 Summary 93

✓CHAPTER 7 23
CELLS

- 7-1 Introduction 96
- 7-2 Tools and techniques 96
- 7-3 The general plan of cells 99
- 7-4 The cytoplasm 99
- 7-5 The nucleus 103
- 7-6 Two kinds of cells 105
- 7-7 Cell walls 106
- 7-8 How do we "know"? 108
- 7-9 The function of the nucleus 108
- 7-10 Cell sizes 112
- 7-11 The cell membrane: a study of function 113
- 7-12 Osmosis and osmotic pressure 116
- 7-13 Summary 118

CHAPTER 8 CELLULAR METABOLISM

- 8-1 Introduction 123
- 8-2 Matter and energy 123
- 8-3 Kinds of molecules in living systems 126
- 8-4 Biochemical pathways 131
- 8-5 Biochemical control mechanisms 132
- 8-6 ATP and energy currency in the cell 133
- 8-7 Respiration: the production of ATP 135
- 8-8 The biochemical pathways of glucose degradation 136
- 8-9 The Krebs cycle 137
- 8-10 Harnessing energy: the electron transport system 138
- 8-11 The energy yield of the anaerobic and aerobic respiratory pathways 141
- 8-12 How biochemical systems are studied 142
- 8-13 The Krebs cycle as a central metabolic hub 143
- 8-14 Summary 145

CHAPTER 9 ^{2/5} NUTRITION OF GREEN PLANTS

- 9-1 Introduction 150
- 9-2 Some background notes 150

- 9-3 The problem 151
- 9-4 Van Helmont's conclusion questioned 152
- 9-5 Another fact is added 153
- 9-6 Chemists enter the scene 154
- 9-7 Ingenhousz sees the light 156
- 9-8 A new problem to solve 158
- 9-9 An old problem is solved 161
- 9-10 The problem solved 163
- 9-11 Photosynthesis: the modern view 165
- 9-12 The dark reactions 169
- 9-13 The light reactions 171
- 9-14 The efficiency of photosynthesis 174
- 9-15 Summary 175

CHAPTER 10 ^{2/5} ORGANIZATION OF THE VASCULAR PLANT BODY

- 10-1 Introduction 180
- 10-2 Tools and techniques 180
- 10-3 General organization of a vascular plant 182
- 10-4 Plant tissues 184
- 10-5 The root system 194
- 10-6 The shoot system 196
- 10-7 Increase in thickness of the plant body 201
- 10-8 Summary 205

✓ CHAPTER 11
TRANSPORTING
SYSTEMS IN VASCULAR PLANTS

- 11-1 Introduction 208
- 11-2 Translocation: the movement of material through plants 210
- 11-3 Movement of water and minerals into the plant 210
- 11-4 Mechanism of stomatal movement 213
- 11-5 The movement of gases in plants 216
- 11-6 Translocation: movement through the xylem 219
- 11-7 Movement through the phloem 224
- 11-8 Movement of liquid out of the plant 228
- 11-9 Movement of metabolic wastes: excretion 228
- 11-10 Summary 229

CHAPTER 12
CELL REPRODUCTION

- 12-1 Introduction 232
- 12-2 Cell division: some problems of study 232
- 12-3 Mitosis and cytokinesis 232
- 12-4 Mitosis: some problems 236
- 12-5 The reduction division: meiosis 238

- 12-6 Self-duplication of mitochondria and chloroplasts 243
- 12-7 Summary 244

CHAPTER 13
GENETICS I: FROM MATH TO MENDEL

- 13-1 Introduction 247
- 13-2 Genetics: a mathematical basis 247
- 13-3 Binomial expansions 249
- 13-4 Mendelian genetics 252
- 13-5 One pair of genes 254
- 13-6 Two pairs of genes 259
- 13-7 Summary 261

CHAPTER 14
GENETICS II:
FROM MENDEL TO MOLECULE

- 14-1 Introduction 265
- 14-2 Linkage 265
- 14-3 Broken links 267
- 14-4 Mapping 267
- 14-5 Chromosomal aberrations 269
- 14-6 Genetics: the fruit fly era 269
- 14-7 Epistasis 271

- 14-8 Quantitative inheritance 273
- 14-9 In search of the gene 274
- 14-10 Viral and other evidence 276
- 14-11 Gene structure 277
- 14-12 Testing the model 281
- 14-13 DNA and chromosome structure 284
- 14-14 Gene function 285
- 14-15 Protein synthesis and the genetic code 287
- 14-16 The gene 292
- 14-17 Summary 293

✓ CHAPTER 15 ²⁰
GROWTH AND DEVELOPMENT I:
THEIR ANALYSIS AND CONTROL

- 15-1 Introduction 297
- 15-2 Concepts of growth 297
- 15-3 Kinetics of growth 297
- 15-4 Control of growth and development 299
- 15-5 Gene regulation: the Jacob-Monod hypothesis 302
- 15-6 Evidence for gene regulation in growth and development 304
- 15-7 Regulation of growth by hormones 307
- 15-8 Mechanism of growth regulator action 314
- 15-9 Summary 317

✓ CHAPTER 16 ²⁹
GROWTH AND DEVELOPMENT II:
FROM FLOWER TO LEAF FALL

- 16-1 Introduction 320
- 16-2 Flowering and the control of plant form 320
- 16-3 From flowers to seeds 325
- 16-4 Experimental studies of cell and embryo growth and development 330
- 16-5 Dormancy and seed germination 331
- 16-6 Control of tissue differentiation in roots and shoots 335
- 16-7 Tropisms 336
- 16-8 Apical dominance and the control of plant form 339
- 16-9 Senescence in plant development 342
- 16-10 Abscission 346
- 16-11 Summary 348

CHAPTER 17
ECOLOGICAL RELATIONSHIPS:
COMPETITION FOR ENERGY

- 17-1 Introduction 353
- 17-2 Ecological niches, habitats, and the ecosystem 354
- 17-3 The food chain 356
- 17-4 The cyclic use of materials 358

- 17-5 Interactions between organisms in the ecosystem 362
- 17-6 Changes in ecosystems through time: succession 366
- 17-7 Summary 369

CHAPTER 18 THE PROCESS OF EVOLUTION

- 18-1 Introduction 373
- 18-2 Natural selection 373
- 18-3 Direction of natural selection 376
- 18-4 The population concept of natural selection 378
- 18-5 The causes of genetic variability within species 379
- 18-6 The nature of species 380
- 18-7 The origin of species 383
- 18-8 Adaptive radiation: evolutionary opportunity and exploitation 386
- 18-9 Adaptation and survival 390
- 18-10 The phylogenetic approach to evolution 391
- 18-11 Phylogeny and classification 394
- 18-12 Summary 395

CHAPTER 19 THE ORIGIN OF LIFE

- 19-1 Introduction 399
- 19-2 The idea of spontaneous generation 399
- 19-3 The origin of life by chemosynthesis 401
- 19-4 Viruses and the origin of life 405
- 19-5 The geological time scale and the origin of life 407
- 19-6 Summary 409

CHAPTER 20 THE EVOLUTION OF PLANTS I: FROM ONE CELL TO MANY

- 20-1 Introduction 414
- 20-2 The role of evolution 414
- 20-3 Evolution of the procaryotes 415
- 20-4 Origin of eucaryotic organisms 417
- 20-5 Diversification of eucaryotes: the Klein-Cronquist hypothesis 422
- 20-6 Evolution among the green algae: the Blackman-West hypothesis 433
- 20-7 Origin of eucaryotes: the Margulis hypothesis 436
- 20-8 Origin and adaptive significance of multicellularity 438

- 20-9 Origin and diversification of sexual systems 439
- 20-10 Summary 444

CHAPTER 21 THE EVOLUTION OF PLANTS II: MIGRATION TO THE LAND

- 21-1 Introduction 447
- 21-2 Immediate ancestors of land plants: a hypothesis 447
- 21-3 Problems faced by the early land plants 448
- 21-4 Migration to the land: a hypothesis 448
- 21-5 The early land plants 449
- 21-6 Evolution of leaves 453
- 21-7 Evolution of the stem 456
- 21-8 Evolution of reproductive systems in the early land plants 461
- 21-9 Evolution of the seed 463
- 21-10 Protection of sporangia 467
- 21-11 Protection of seeds 468
- 21-12 Secondary invasions of the land: bryophytes 472
- 21-13 Secondary invasions of the land: the fungi 473
- 21-14 Secondary invasions of the land: lichens 477
- 21-15 Summary 479

CHAPTER 22 THE EVOLUTION OF PLANTS III: FLOWERING PLANTS, CONQUERORS OF THE LAND

- 22-1 Introduction 482
- 22-2 What is a flowering plant? 482
- 22-3 Early fossils of the flowering plants 484
- 22-4 Ancestors of the flowering plants 485
- 22-5 Nature of the earliest flowering plants: a model 486
- 22-6 Protection of ovules and seeds: the carpel 487
- 22-7 Evolution of other flower parts 489
- 22-8 Fruits and seed dispersal 492
- 22-9 The original home of the flowering plants: a hypothesis 496
- 22-10 Adaptive radiation of the flowering plants 497
- 22-11 Perfection of the conducting system 499
- 22-12 Origin of the deciduous habit 500
- 22-13 Origin of herbaceous flowering plants 501
- 22-14 Flower diversity and its adaptive significance 502
- 22-15 Ovule protection and flower diversity 504
- 22-16 Summary 507

APPENDIX 1
CONVERSION OF TEMPERATURE SCALES 510

APPENDIX 2
CALCULATION
OF VARIANCE IN A SAMPLE OF DATA 512

APPENDIX 3
TABLE OF AMINO ACIDS 514

APPENDIX 4
SAMPLE KEY
TO TREES, USING FRUIT 518

APPENDIX 5
A CLASSIFICATION OF PLANTS 521

GLOSSARY 526

GENERAL INDEX 543

INDEX OF PLANT AND ANIMAL NAMES 553
