

Contents

Contents vii
Preface xiii

1. Introduction

- I. Purpose 1
- II. Seed Germination Ecology 1
- III. A New Book on Seed Germination 2
 - A. Need 2
 - B. Contents 3
 - References 3

2. Ecologically Meaningful Germination Studies

- I. Purpose 5
- II. Guidelines for Laboratory Studies on Germination Ecology 5
 - A. Collect Seeds at Maturity 5
 - B. Use Seeds Immediately after Harvesting 6
 - C. Check for Imbibition of Water 8
 - D. Use Intact Natural Dispersal Units 8
 - E. Replications 9
 - F. Statistical Analyses 9
 - G. Petri Dishes 10
 - H. Substrate 10
 - I. Water 11
 - J. pH 12
 - K. Disinfectants 12
 - L. Constant versus Alternating Temperature Regimes 12
 - M. Light and Darkness 13
 - N. Store Seeds under Natural or Simulated Habitat Conditions 16

- O. Test Seeds Frequently 17
- P. Rates of Germination 17
- Q. Length of Germination Test Period 19
- R. Test Viability of Ungerminated Seeds 19
- III. Germinating Seeds You Know Nothing About 19
 - References 20

3. Types of Seed Dormancy

- I. Purpose 27
- II. Definition of Dormancy 27
- III. Types of Seeds 27
- IV. Overview of Types of Seed Dormancy 29
 - A. Physiological Dormancy 29
 - B. Morphological Dormancy 34
 - C. Morphophysiological Dormancy 37
 - D. Physical Dormancy 37
 - E. Physical plus Physiological Dormancy 39
 - F. Chemical Dormancy 39
 - G. Mechanical Dormancy 42
 - References

4. Germination Ecology of Seeds with Nondeep Physiological Dormancy

- I. Purpose 49
- II. Discovery of Dormancy Cycles 49
- III. Changes in the State of Dormancy 50
- IV. The Dormancy Continuum 54
- V. Environmental Factors Causing Changes in Dormancy States 56
 - A. Temperature 57
 - B. Darkness 64
 - C. Light 66
 - D. Gases 67
 - E. Water 69

- F. Inorganic Chemicals 70
- G. Organic Chemicals 72
- References 76

5. Germination Ecology of Seeds with Morphophysiological Dormancy

- I. Purpose 87
- II. Types of Morphophysiological Dormancy 87
 - A. Nondeep Simple Morphophysiological Dormancy 87
 - B. Intermediate Simple Morphophysiological Dormancy 89
 - C. Deep Simple Morphophysiological Dormancy 89
 - D. Deep Simple Epicotyl Morphophysiological Dormancy 90
 - E. A Special Type of Simple Epicotyl Morphophysiological Dormancy 93
 - F. Deep Simple Double Morphophysiological Dormancy 94
 - G. A Special Type of Simple Double Morphophysiological Dormancy 95
 - H. Nondeep Complex Morphophysiological Dormancy 96
 - I. Intermediate Complex Morphophysiological Dormancy 97
 - J. Deep Complex Morphophysiological Dormancy 97
- References 98

6. Germination Ecology of Seeds with Physical Dormancy

- I. Purpose 101
- II. Germination Phenology 101
- III. Internal Moisture Conditions of Seeds 102
- IV. Artificial Softening of Water-Impermeable Seed (or Fruit) Coats 104
 - A. Mechanical Scarification 104
 - B. Acid Scarification 105
 - C. Enzymes 105
 - D. Organic Solvents 105
 - E. Percussion 105
 - F. High Atmospheric Pressures 107
 - G. Wet Heat 107
 - H. Dry Heat 109
 - I. Dry Storage 110
 - J. Radiation 111
 - K. Ultrasound 111
 - L. Low Temperatures 111
- V. Germination Requirements of Permeable Seeds 112
- VI. Environmental Control of Breaking Physical Dormancy 114

- A. High and High Fluctuating Temperatures 114
- B. Drying at High Temperatures 116
- C. Fire 116
- D. Low Winter Temperatures 119
- E. Microbial Action 120
- F. Effects of Animals on Seeds with Physical Dormancy 120
- G. Effects of Animals on Seeds without Physical Dormancy 122

- VII. Seeds with Physical plus Physiological Dormancy 123
- References 124

7. Germination Ecology of Seeds in the Persistent Seed Bank

- I. Purpose 133
- II. Aerial Seed Banks 133
 - A. Development of Serotiny 133
 - B. How Long Is Seed Dispersal Delayed? 134
 - C. Seed-Holding Structures 134
 - D. Size of Seed Bank 135
 - E. Opening of Woody Structures 135
 - F. Lethal Temperatures 136
 - G. Seed Dormancy and Germination 136
- III. Soil Seed Banks 137
 - A. Formation 137
 - B. Methodology of Studies 138
 - C. Types of Persistent Seed Banks 141
 - D. Habitats and Seed Density 143
 - E. Kinds of Seeds 143
- IV. Longevity of Seeds in the Soil 145
 - A. Inferred Age 145
 - B. Actual Age 148
 - C. Survivorship Curves 149
- V. What Can Happen to Seeds in the Soil? 149
 - A. Models of Seed Dynamics in the Soil 149
 - B. Studies on Seed Bank Dynamics 151
 - C. Changes in Dormancy States 152
 - D. *In Situ* Germination 154
 - E. Germination on the Soil Surface 155
 - F. Seed Death Due to Aging 155
 - G. Seed Death Due to Activities of Soil Organisms 157
 - H. Seed Death: Effects of Fire or Flooding 160
- VI. Effects of Seed Banks on Populations 160
 - A. Survival in Risky Environments 160
 - B. Population Stability 161
 - C. Population Variability 161
 - D. Effect of Seed Banks on Selection of Other Traits 162
 - E. Density-Escaping Characteristics 163
 - F. Coexistence of Species 163
- VII. Persistence of Communities 164
- References 164

8. Causes of Within-Species Variations in Seed Dormancy and Germination Characteristics

- I. Purpose 181
- II. Inheritance of Seed Dormancy 181
 - A. Species with Heritable Seed Dormancy 181
 - B. Types of Inherited Seed Dormancy 181
 - C. Selection of Pure Lines 181
 - D. Crosses Within a Species 182
 - E. Maternal, Paternal, and Embryonic Genotypes 183
 - F. Maternal Influence 183
 - G. Ploidy Level, B Chromosomes, and Isochromosomes 184
 - H. Inbreeding Depression 184
- III. Inheritance of Dormancy Breaking and Germination Characteristics 185
 - A. Degree of Dormancy 185
 - B. Rate of Dormancy Loss 186
 - C. Germination Requirements 186
 - D. Germination Speed 186
 - E. Storability 187
- IV. Variation in Germination Responses of Seeds from Different Populations of the Same Species 187
 - A. Types of Variation 187
 - B. Common Garden Studies 190
- V. Environmental Factors That Cause Preconditioning Effects 192
 - A. Carbon Dioxide Levels 192
 - B. Competition 192
 - C. Day Length 192
 - D. Fungi 193
 - E. Herbicides 193
 - F. Hormones 193
 - G. Length of Growing Season 194
 - H. Light Quality 194
 - I. Mineral Nutrition 194
 - J. Physiological Age of Plants 195
 - K. Position on Mother Plant 195
 - L. Premature Defoliation 198
 - M. Soil Moisture 198
 - N. Solar Irradiance 198
 - O. Temperature 199
 - P. Time 200
 - Q. Ultraviolet Light 200
- VI. Seed Changes as a Result of the Preconditioning Environment 200
 - A. Chemical Compounds 200
 - B. Seed Size, Color, and Shape 200
 - C. Structure 207
 - D. Heritable Changes 207
- VII. Seed Polymorphism 208
 - A. Somatic Polymorphism 208
 - B. Genetic Polymorphism 209

- C. Dimorphic Plants Whose Seeds Have Different Germination Responses 209
 - D. Mass Seed Collections and Seed Polymorphism 209
 - E. Causes of Seed Polymorphism 210
 - F. Consequences on Seedling Recruitment 211
- ## VIII. Cleistogamy and Seed Germination Ecology 215
- A. Cleistogamous Flowers 215
 - B. Causes of Cleistogamy 215
 - C. Seed Size 217
 - D. Seed Germination 217
 - E. Consequences on Seedling Recruitment 218
- ## References 219

9. A Geographical Perspective on Germination Ecology: Tropical and Subtropical Zones

- I. Purpose 239
- II. Evergreen Rain Forests 239
 - A. Climax Trees 239
 - B. Pioneer Trees 257
 - C. Dormancy and Germination of Shrubs 260
 - D. Dormancy and Germination of Bamboos 261
 - E. Dormancy and Germination of Vines (Lianas) 261
 - F. Dormancy and Germination of Herbaceous Species 261
 - G. Dormancy and Germination of Epiphytes 262
 - H. Special Biotic Factors 264
- III. Tropical Mountains 265
 - A. Dormancy and Germination of Montane Species 265
 - B. Dormancy and Germination of Alpine Species 266
- IV. Semievergreen Tropical Forests 267
 - A. Germination Phenology 267
 - B. Dormancy and Germination of Trees 267
 - C. Dormancy and Germination of Bamboos 268
 - D. Dormancy and Germination of Shrubs 268
 - E. Dormancy and Germination of Lianas 271
 - F. Dormancy and Germination of Herbaceous Species 271
- V. Tropical Deciduous Forests 273
 - A. Dormancy and Germination of Trees 275
 - B. Dormancy and Germination of Shrubs 277
 - C. Dormancy and Germination of Herbaceous Species 278
 - D. Dormancy and Germination of Epiphytes 278
 - E. Chlorophyllous Embryos 278
 - F. Special Biotic Factor: Seed Predation 279
- VI. Tropical Dry Woodlands, Natural Savannas, and Grasslands 281
 - A. Dormancy and Germination of Trees 282
 - B. Dormancy and Germination of Shrubs 285

- C. Dormancy and Germination of Bamboos 286
 - D. Dormancy and Germination of Herbaceous Species 286
 - E. Special Factor: Fire 292
 - VII. Hot Semideserts and Deserts 293
 - A. Dormancy and Germination of Trees 294
 - B. Dormancy and Germination of Shrubs 296
 - C. Dormancy and Germination of Perennial Succulents 301
 - D. Dormancy and Germination of Herbaceous Perennials 302
 - E. Dormancy and Germination of Vines 305
 - F. Annual Species 305
 - G. Special Factor: Water as It Relates to Dispersal 312
 - References 313
- 10. A Geographical Perspective on Germination Ecology: Temperate and Arctic Zones**
- I. Purpose 331
 - II. Sclerophyllous Woodlands with Winter Rain 331
 - A. Dormancy and Germination of Trees 332
 - B. Dormancy and Germination of Shrubs 333
 - C. Dormancy and Germination of Vines 337
 - D. Dormancy and Germination of Herbaceous Species 337
 - E. Special Factor: Fire 339
 - F. Special Factor: Allelopathy 347
 - G. Special Factor: Myrmecochory 349
 - III. Moist Warm Temperature Woodlands 351
 - A. Trees 352
 - B. Shrubs 356
 - C. Dormancy and Germination of Bamboos 356
 - D. Dormancy and Germination of Lianas and Vines 357
 - E. Herbaceous Species 358
 - F. Dormancy and Germination of Epiphytes 360
 - G. Special Factor: Myrmecochory 361
 - IV. Deciduous (Nemoral) Forests 361
 - A. Trees 361
 - B. Dormancy and Germination of Bamboos 366
 - C. Shrubs 367
 - D. Dormancy and Germination of Vines 367
 - E. Dormancy and Germination of Herbaceous Woodland Species 367
 - F. Dormancy and Germination of Herbaceous Nonwoodland Species 374
 - G. Special Factors 385
 - V. Steppes or Grasslands of the Temperate Zones 387
 - A. Dormancy and Germination of Trees 388
 - B. Dormancy and Germination of Shrubs 388
 - C. Dormancy and Germination of Herbaceous Species 388
 - D. Dormancy and Germination of Weeds 396
 - E. Special Factors 396
 - VI. Semideserts and Deserts with Cold Winters 399
 - A. Dormancy and Germination of Shrubs 399
 - B. Dormancy and Germination of Herbaceous Species 401
 - C. Dormancy and Germination of Weeds 403
 - D. Special Factor: Salinity 403
 - VII. Boreal Coniferous and Temperate Subalpine Zones 404
 - A. Dormancy and Germination of Species in Boreal and North-Temperate Subalpine Zones 405
 - B. Dormancy and Germination of Species in South-Temperate Subalpine Zones 411
 - C. Special Factors 412
 - VIII. Arctic and Temperate-Zone Alpine Tundra 414
 - A. Dormancy and Germination of Shrubs 415
 - B. Dormancy and Germination of Herbaceous Species 416
 - C. Special Factor: Vivipary 420
 - IX. Mountains 420
 - A. Montane 424
 - B. Woodland (Colline) 427
 - References 429
- 11. Germination Ecology of Plants with Specialized Life Cycles and/or Habitats**
- I. Purpose 459
 - II. Parasitic Plants 459
 - A. Holoparasites 459
 - B. A Holoparasite with Chlorophyll: *Cuscuta* 465
 - C. A Hemiparasitic Member of the Lauraceae: *Cassytha* 467
 - D. Rooted Hemiparasites Whose Seeds Require a Host Stimulus for Germination: *Striga* and *Alectra* 467
 - E. Rooted Hemiparasites Whose Seeds Do Not Require a Host Stimulus for Germination 475
 - F. Nonrooted Hemiparasites: Mistletoes 477
 - III. Mycoheterotrophic Plants Other Than Orchids 482
 - IV. Orchids 482
 - A. Types of Seed Dormancy 483
 - B. Dormancy-Breaking Requirements 484
 - C. Germination Requirements 485
 - V. Carnivorous Plants 489
 - A. Types of Seed Dormancy 490
 - B. Longevity of Stored Seeds 491
 - C. Dormancy-Breaking Requirements 491

- D. Germination Requirements 491
 - VI. Aquatic (Nonsaline) Plants 492
 - A. Types of Seed Dormancy 493
 - B. Dormancy-Breaking Requirements 493
 - C. Germination Requirements 500
 - VII. Halophytes 508
 - A. Salt Marshes and Salt Deserts 508
 - B. Beaches, Cliffs, and Foredunes 518
 - C. Marine Angiosperms 522
 - D. Mangroves 524
 - VIII. Psammophytes of Nonsaline Soils 528
 - A. Types of Dormancy 529
 - B. Dormancy-Breaking Requirements 529
 - C. Germination Requirements 531
 - References 534
- 12. Biogeographical and Evolutionary Aspects of Seed Dormancy**
- I. Purpose 559
 - II. World Biogeography of Seed Dormancy Types 559
 - A. Dormancy vs Nondormancy 559
 - B. Geographical Distribution of Seed Dormancy Types 560
 - C. Environmental Gradients, Seed Dormancy Types, and Life Forms 561
 - D. Specialized Habitats or Life Cycles 564
 - III. Theoretical Considerations on the Evolution of Seed Dormancy 565
 - A. Persistence in Risky Environments 565
 - B. Escape from Competition 570
 - C. Survival in Unfavorable Seasons 572
 - D. Optimizing the Time for Germination 572
 - E. Seed Dormancy and the Evolution of Other Traits 573
 - IV. Paleoclimate as a Background for the Evolution of Seed Dormancy 575
 - A. Rainfall Patterns 575
 - B. Temperature 576
 - V. Fossil History of Seeds as It Relates to Dormancy 578
 - A. Fossil Seeds 578
 - B. Fossil Embryos 581
 - C. Speculations on Dormancy 583
 - VI. Seed Dormancy and Phylogenetic Position of Family 584
 - A. Angiosperms 584
 - B. Gymnosperms 585
 - VII. Seed Dormancy and Presumed Age of Plant Families 585
 - A. Time of Family Origin 586
 - B. Time of Dormancy Origin 587
 - VIII. Seed Dormancy and Family Tree of Seed Phylogeny 589
 - IX. Type of Embryo and Presumed Age of Plant Families 592
 - A. Angiosperms 592
 - B. Gymnosperms 592
 - X. Origins and Relationships of Seed Dormancy Types 593
 - A. Seed/Embryo Types 593
 - B. Seed Dormancy Types 595
 - C. Development of Seed Dormancy Types and Nondormancy 597
 - D. Future Studies 607
 - References 607
- Subject Index 615
- Taxonomic Index 627
